

Code for video: “View and Delete Branches”

1. `git push origin master`
  2. `git branch`
  3. `git branch -d edit` (we got an error)
  4. `git branch -D edit` (capital D to “force” the delete)
  5. `git branch -D gemfileedit`
  6. `git branch`
- Remember: “edit” and “gemfileedit” were the names of my branches. If you used different names replace these names with you names.
