

Code for video: “Custom Registration”

In Controllers create registrations_controller.rb

Update with

```
class RegistrationsController < Devise::RegistrationsController

  private

  def sign_up_params
    params.require(:user).permit(
      :email,
      :password,
      :password_confirmation,
      :username,
      :firstname,
      :lastname
    )
  end

  def account_update_params
    params.require(:user).permit(
      :email,
      :password,
      :password_confirmation,
      :current_password,
      :username,
      :firstname,
      :lastname
    )
  end
end
```

Update your routes file by replacing: `devise_for :users` with
`devise_for :users, :controllers => { registrations: 'registrations' }`
