

Code for video: “Important!! Fixing Up Some Errors Doh”

Update the `contacts_controller.rb` file with

`ContactMailer.contact_email(name, email, message).deliver`

Make sure that the **`contact_email.html.erb`** file is named correctly

Do a push to git and heroku from your master branch

**`heroku run rake db:migrate`**

test your contact mailer (remember it could take a few minutes for sendgrid to dispatch the mail.)
