Code for video: "Heroku Production Push"

1. Push users branch up to github
2. Switch over to master branch and merge users branch
3. Push the master up to git hub
4. heroku create name_of_your_site
5. login to heroku (in the terminal)
6. move the sqlite gem into the development block

```
group :development do
   gem 'web-console', '~> 2.0'
   gem 'spring'
   gem 'sqlite3'
end
```

7. bundle
8. do another commit of your master branch to git hub
9. git push heroku master
10. heroku run rake db:migrate
11. check out your site live online!
