Code for video: "Update your IDE with SSH access"

1. git remote rm origin
2. git remote -v (this command allows you to see your git remotes)
3. go to root of your repository at github.com and copy the SSH link

4. git remote add origin THE LINK YOU COPIED GOES HERE
5. git remote -v (you should see your remote "fetch" and "push"
6. open up the Gemfile and delete any text that start with a "#". Then save that file.
7. Return to the terminal tab and enter: git add -A
8. git commit -m "testing push without credentials"
9. git push origin master
10. go to your repository and the comment listed on the gemfile should say "testing push without credentials"
