Code for video: "Another Heroku Push!"

1. git add -A
2. git commit -m "added user article associations"
3. git push origin association (or whatever your current branch name is)
4. git checkout master
5. git merge association
6. git push origin master
7. git push heroku master

if you get errors on heroku you can run "heroku logs" in your terminal and this can assist.

However, running heroku run rake db:reset is how you would reset your heroku database.
